

PROCLAMATION

“Pancreatic Cancer Awareness Month” November 2010

WHEREAS, in 2010, an estimated 43,140 people will be diagnosed with pancreatic cancer in the United States and 36,800 will die from the disease; and

WHEREAS, pancreatic cancer is one of the deadliest cancers and is the fourth leading cause of cancer death in the United States; and

WHEREAS, when symptoms of pancreatic cancer present themselves, it is usually too late for an optimistic prognosis, and 75 percent of pancreatic cancer patients die within the first year of their diagnosis while 94 percent of pancreatic cancer patients die within the first five years; and

WHEREAS, incidence of pancreatic cancer is approximately 50 percent higher in African Americans than in other ethnic groups; and

WHEREAS, there is no cure for pancreatic cancer and there have been no significant improvements in survival rates in the last 40 years; and

WHEREAS, the Federal Government invests significantly less money in pancreatic cancer research than it does in any of the other leading cancer killers; and pancreatic cancer research constitutes only 2 percent of the National Cancer Institute’s federal research funding, a figure far too low given the severity of the disease, its mortality rate, and how little is known about how to arrest it; and

WHEREAS, the Pancreatic Cancer Action Network is the first and only national patient advocacy organization that serves the pancreatic cancer community in Carson City and nationwide by focusing its efforts on public policy, research funding, patient services, and public awareness and education related to developing effective treatments and a cure for pancreatic cancer; and

WHEREAS, the Pancreatic Cancer Action Network and its affiliates in Carson City support those patients currently battling pancreatic cancer, as well as to those who have lost their lives to the disease, and are committed to nothing less than a cure; and

WHEREAS, the good health and well-being of the residents of Carson City are enhanced as a direct result of increased awareness about pancreatic cancer and research into early detection, causes, and effective treatments.

NOW, THEREFORE, I, Robert L. Crowell, Mayor of Carson City, Nevada, do hereby proclaim November 2010 as “**Pancreatic Cancer Awareness Month**” in Carson City, Nevada.

Dated this 16th Day of November 2010.

Robert L. Crowell, Mayor

PANCREATIC CANCER ACTION NETWORK

Dear Mayor Robert Crowell and The Carson City Board of Supervisors,

As a Nevadan, I am writing on behalf of the Pancreatic Cancer Action Network and the estimated 36,800 Americans who will die of pancreatic cancer in 2010. In this year alone, pancreatic cancer will afflict more than 42,000 Americans, 75% of whom will die within one year of their diagnosis, and 94% of whom will die within five years of diagnosis.

My husband, Stuart Jed, was diagnosed with pancreatic cancer in December 2008, and our lives lurched drastically onto an unexpected track. He has been fighting this disease with surgery, chemotherapy, and a strong desire to live for the past 21 months. So far, Stu is member of the tiny minority of "SURVIVORS".

To date, pancreatic cancer is the fourth leading cause of cancer death in the United States, and it is the deadliest, with the lowest survival rate of any major cancer. Furthermore, there has been little improvement in the survival rates over the last forty years. We need your help to shine a spotlight on this disease and finally make progress in developing treatments and early detection tools. By issuing a Carson City proclamation supporting the observance of November 2010 as Pancreatic Cancer Awareness Month, you can help us to raise awareness in our community.

I have attached a draft of the proclamation text for your review. I am happy to provide additional official Pancreatic Cancer Action Network material, including pancreatic cancer facts and statistics and National Cancer Institute (NCI) funding information, upon request. Also, you may visit the website at www.pancan.org.

We request that a total of three originals of the proclamation to be made available for our records. Please contact me at 775.832-4477, or at ginniejed@aol.com with any questions. I look forward to working with you to issue a proclamation that will recognize November as Pancreatic Cancer Awareness Month in Washoe County, Nevada, and bring much needed attention to this deadly disease. Thank you for your interest in this important issue.

Sincerely,

Virginia (Ginnie) Jed
Community Representative Volunteer

S. 3320/H.R. 745 Bill Fact Sheet

It's Time for a Death Defying Strategy: Support the Pancreatic Cancer Research & Education Act (S. 3320/H.R. 745)

We're Not Making Progress on pancreatic cancer and the consequences are deadly

- Pancreatic cancer is one of the deadliest cancers and is one of the few cancers for which survival has not improved substantially in nearly 40 years. In fact, pancreatic cancer is the only one of the top 10 cancer killers that still has a five-year survival rate in the single digits.¹
- The number of new pancreatic cancer cases and the number of deaths caused by pancreatic cancer are increasing – not decreasing. Most alarmingly, the expected number of new pancreatic cancer cases is projected to increase by 55% between the years 2010 and 2030.²
- 94% of those diagnosed with pancreatic cancer die within the first five years¹ because there are no early detection tools or effective treatments for this disease. Given the research discovery timeline, it is unlikely we will have the tools required to manage the significant, projected increase in expected cases unless we take dramatic action now.
- The National Cancer Institute (NCI) does not currently have a strategic plan to make progress on this deadly killer.

We Need to Step Up the investment in pancreatic cancer research

- Currently, the NCI allocates just 2% of its \$5 billion annual budget for pancreatic cancer research.
- There is no question that when researchers are properly funded, research advances follow:
 - While in 2009 NCI funded approximately 8,700 research grants, contracts and intramural research projects across all forms of cancer, only 471 (approximately 5%) were relevant to pancreatic cancer.³
 - Further, NCI currently funds significantly fewer pancreatic cancer researchers at any funding level compared to the other top five cancer killers. In 2009, only 334 pancreatic cancer researchers were funded, compared to 1,558 breast cancer researchers, 838 prostate cancer researchers, 835 lung cancer researchers and 820 colorectal cancer researchers.³
- Less than 2% of the NCI's 2009 awards for early-career and established investigators (K, F and T awards) had relevance to pancreatic cancer. Even more troubling, NCI reduced the total funding allocated for these important awards from their 2008 level.³
- Given the lack of funding for pancreatic cancer research, senior scientists from other areas of biomedical and cancer research do not have the incentive to apply their knowledge to this disease.
 - Out of the researchers who received NCI funding specifically for pancreatic cancer research, only 32 received funding totaling \$500,000 or more, a level appropriate for senior scientists. By comparison, this level of funding was awarded to 240 researchers in breast cancer, 108 in prostate cancer, and 110 in colorectal cancer. The positive survival trends in these other cancers strongly suggest that these larger grants are necessary to further progress and attract investigators.³

We Need a Unique and Targeted approach to studying this disease

- Pancreatic cancer tumors are different than many other tumors. The cellular make-up of the tumors is different and therefore, specialized research techniques must be applied.
- Numbers are also an issue. An estimated 43,140 Americans will be diagnosed with pancreatic cancer in 2010 compared to 209,060 with breast cancer.¹
- Due to the wide geographic dispersion of relatively few pancreatic cancer patients, few individual medical centers treat a sufficient numbers of patients to conduct statistically significant research.
- Furthermore, because few patients qualify for surgery and most patients die quickly after diagnosis, scant pancreatic cancer tissue is available for research.
- Additionally, many patients who might consider participating in clinical trials are too sick to do so or die before they can enroll.
- These are challenges that can be overcome, but they require a concerted effort by NCI to develop a specific strategic plan to address these and other challenges in pancreatic cancer research in addition to an infusion of targeted research funding.
